

Life Care Management

When your loved ones live far away and cannot easily travel to you when a healthcare emergency arises, having a Life Care Manager can make all the difference in the world. Your Life Care Manager can be promptly at your side in the Emergency Room and be your healthcare advocate day or night.

Be proactive before there is a crisis by educating yourself and your family and prepare ahead of time. Our Life Care Management program can help with several options, depending on your needs.

Life Care Monitoring Program

An affordable and ongoing program ideal for a client that requires only a small amount of assistance only for an emergency or hospital admission. This program includes an initial assessment, education and advocacy, monthly reassessment, review of medication changes and doctor's orders or recommendations, referrals to local services/resources, communication with family and the Life Care Manager "on call" for emergencies.

Life Care Management Program

This ongoing program is ideal for a client who can benefit from more comprehensive attention to daily health/living, education and advocacy, arrangement/monitoring of home services, coordination and attendance of medical visits, navigation of insurance claims, assistance with alternative living arrangements, emergency support services, prescription re-fill coordination and liaison communication to family. The extent of services is determined through the initial assessment.

Life Care Management Assessment & Consultation Package

This package offers clients, families and caregivers a onetime Life Care Management Assessment with a customized care plan, recommendations and a review of the care plan. It includes up to two in-person visits with the Life Care Manager.

Life Care Management Consultation

This one hour consultation is designed for clients, families and caregivers who are seeking guidance and education. A Life Care Manager will meet to discuss care options and recommendations for community resources to meet the specific needs and issues.
